Features Include: Extremely fast and easy CAD creation, So quick and easy you'll be creating projects in no time! Q: How to use the class name in formula for Act.addColumn()? I have a sheet with about 12 tabs that contain the same sheet but with different data. I want to avoid having to adjust the formula in the "Equity" tab for each spreadsheet. I can add the column by: actSheet=act.addColumn("EQUITY", "Equity", actSheet.getRange(1, 5)); But I also want to make sure that each sheet adds the tabname to the cell so I use: actSheet.getRange(1, 5).setFormula("=EQUITY(T"+String(index) +")"); But the formula does not work because the sheetname and the tabname is converted to strings. What should I do to make the sheetname and tabname work?

SolidWorks is a platform for 3D CAD, CNC, and CAE software. It is best known as a CAD system (computer-aided design) used for the computer-aided design and manufacturing (CAD CAM) of parts and assemblies. The software allows its users to produce accurate and robust 3D design models, as well as high-quality 2D technical drawings. SolidWorks features include functional and mechanical design, graphics technology, and engineering simulation. As a product, SolidWorks fits into the CAD category of engineering, architecture, and construction design software. SolidWorks Pro is the top-of-the-line version of the software and is used in the product development of all types of engineering and architectural projects, including manufacturing projects and projects that involve fabrication of large assemblies. SolidWorks Ultimate is the intermediate version of SolidWorks. It is geared towards in-house design and has several proprietary functionalities. You can learn how to design and simulate in SolidWorks here. History of the Bicycle The bicycle was invented around 1830 and was not appreciated widely until the era of the automobile. Some urban areas began to develop bicycle paths. By 1886, almost every city had a bicycle path. The bicycle became more popular as a transportation mode and as the bicycle's capabilities increased. In the 1890s, the new Lilliputian cycles came on the scene, and in the early 1900s, a few vehicles with rack and pinion steering were developed. In 1908, two-wheelers were already being mass-produced by companies such as Aitken and Hanson in England and later by Schwinn in America. In the United States, the bicycle was developed by such people as J. J. Stevens, who invented the safety pedal brake and an early form of the rack and pinion steering, and by Paul and Philippe Welter, who developed the crank-driven, belt-driven, and overdrive transmission. By the early 1900s, the bicycle became a useful means of transportation, and it became important to design a bicycle that was comfortable to ride. Also, it d0c515b9f4
