ePub Maker is a software application that provides users with a simple means of creating digital books from Microsoft Word documents and HTML files, and appending custom data. Seamless setup and well-organized interface The installation process is a piece of cake, as it does not come with any unpleasant surprises and it does not last longer than a few moments. After completing it, you are met with a pretty well-structured GUI, as it is comprised of a menu bar, a pane in which to preview uploaded items and a few tabs which give you quick access to all available options. In addition to that, extensive Help contents are provided, thus making sure that even people with little or no previous experience with computers can find their way around it. Supported file types and options you can configure This utility allows you to create digital books from DOC or DOCX documents, as well as multiple HTM, XML, HTML, XHTML and SHTML formats. In addition to that, you can input information pertaining to it, namely author, book name, subject, publisher, ID, description and language, as well as upload a cover image using a JPG, PNG, GIF and BMP file extension. It is possible to automatically extract chapter titles as the table of contents, from file name, first heading or HTML title, split Word HTML on section break, extract Word properties, use global style theme and remove particular HTML elements (e.g. scripts, forms, links, images, media). Conclusion To sum up, ePub Maker is a pretty efficient piece of software for those interested in creating their own e-books. The interface is accessible to all types of users; all tasks are performed in a timely manner and the amount of resources necessary in order to run it properly is insignificant.]]>2016-07-20T14:00:00.000-04:00

Now the model looks something like: class User(models.Model): name = models.CharField(max_length=255) surname = models.CharField(max_length=255) This gives each user just one entry under 'name' and 'surname'. However, there is a constant use case for user1 to have a separate entry under name and surname. Is there an easy way to create a field for surname where its value is the same as the 'name' field? A: Put your users in an array, with a field for each: class User(models.Model): users = models.ArrayField(models.CharField(max_length=255), default=list) Or, if you want a consistent list of users: class User(models.Model): 09e8f5149f
